

The next step in your pet's care is the spay/neuter surgery. At Lebanon Animal Hospital we treat your pet with the best quality of medicine.

- All cats will receive medication to calm them and prevent any anxiety before the surgery begins.
- During surgery heart rate, respiratory rate, oxygenation level, temperature and blood pressure are monitored.
- An IV catheter and fluids are used to prevent dehydration, regulate blood pressure and heart rate.
- All cats will go home with pain medication after surgery

At Lebanon Animal Hospital we examine our patients twice yearly for wellness and preventative care. Preventative care includes yearly rabies and respiratory disease vaccinations. We will perform a fecal exam to verify that your pet is parasite free. Please bring a stool sample to your appointment.

We are an AAHA-accredited veterinary hospital.

Accreditation by AAHA means that an animal hospital has been evaluated on approximately 900 standards of veterinary excellence.

To maintain their accreditation, hospitals undergo a rigorous review by veterinary experts every three years. Pets are our passion, and keeping them healthy is our #1 priority.

At Lebanon Animal Hospital, we strive to deliver excellent care for pets, because your pets deserve nothing less.

Learn more about AAHA accreditation and why our accreditation is important to you and your pet.

Every cat owner wants to provide the best care for their new family member. Our First Year Plan gives them a great head start with optimal veterinary care. Preventing behavioral issues are the key at this point.

At Lebanon Animal Hospital, we strive to provide our patients with a stress free environment. Using various treats and techniques we encourage a fear free zone.
